

GOCs UAE HRM System Blueprint

Product Requirements and Delivery Plan

UAE private sector and Dubai operational context

Prepared for product, engineering, HR and payroll stakeholders

8 September 2026 | Version 1.1

Executive Summary

We will retain the current GOCs HRM as the functional base and redesign its organisation, payroll and compliance foundations before positioning it as a UAE-ready product. The current application already covers employee records, attendance, leave, payroll, approvals, documents, recruitment, onboarding, performance, training, compliance, reporting and employee self-service. The main work is to replace simplified rules with controlled, auditable UAE workflows.

Primary design decision. The company structure will be position-based. A designation will define a reusable job title and grade. A position will represent an approved seat in a legal entity, branch and department, and will report to another position. An employee will occupy a position. This model supports vacancies, multiple employees with the same designation, acting assignments, transfers, succession and reliable headcount planning.

The first release must prioritise accurate organisation data, genuine Wage Protection System outputs, payroll controls, statutory leave and overtime rules, end-of-service calculations, employee document renewals, Emiratisation monitoring and data protection. Recruitment and talent modules can continue in parallel, but they must not delay the compliance foundation.

Document Purpose

This document defines the target system, explains how the current project will evolve, records the UAE-specific requirements and provides a phased delivery plan. It is intended to align business stakeholders, HR and payroll users, product owners, designers, developers and testers.

This is a product and implementation baseline, not legal advice. Before production launch, UAE payroll specialists and the selected bank or exchange house must validate calculations, Salary Information File formats and jurisdiction-specific rules.

Contents

1. Current system assessment
2. Target organisation architecture
3. UAE legal and operational requirements
4. Functional module scope
5. Core workflows
6. Security and nonfunctional requirements

8. Delivery roadmap
9. Acceptance criteria
10. References

1 Current System Assessment

The existing project is a useful implementation base. It should be extended rather than replaced, provided that the core data model and compliance calculations are corrected early.

Area	Current position	Assessment
Technology	.NET 10 API, Next.js portal, Flutter app, PostgreSQL and JWT	Modern and suitable for continued development
Functional scope	27 controllers, 128 API endpoints, 26 portal pages and 26 mobile screens	Broad coverage for a prototype
Organisation chart	Built from employee manager_id relationships	Works for a small team but cannot model vacancies or planned positions
Designation	Stores name and active status only	Needs grade, job family and reporting-position rules
Payroll export	Simplified WPS-labelled CSV	Not a verified UAE Salary Information File
End of service	Simplified 21-day and 30-day estimate	Needs eligibility, unpaid leave, jurisdiction and final-settlement rules
Employee compliance	Passport, Emirates ID and visa data with alerts	Good base; workflows and ownership must be added
Quality controls	Limited automated tests and several large service and page files	Requires modularisation and stronger regression coverage

Current Strengths

- A working admin portal, authenticated API and employee mobile application already exist.
- Core HR, leave, attendance and payroll data are connected to the same employee record.
- Role-based access, approvals, document uploads and expiry alerts provide a usable starting point.
- Recruitment, onboarding, performance, training, assets and travel modules reduce the amount of greenfield work.

Critical Gaps Before UAE Production Use

- The organisation chart depends on named employees instead of approved positions.
- The current payroll CSV does not implement a validated bank or exchange-house SIF specification.
- Payroll lacks full maker-checker approval, period locking, reversal, arrears and audit controls.
- EOSB is an estimate and does not yet cover all eligibility and jurisdiction scenarios.
- Emiratisation, GPSSA or GCC pension, DIFC DEWS and free-zone rule profiles are not complete.
- Arabic, right-to-left layout and field-level privacy controls require product-wide implementation.

2 Target Organisation Architecture

The organisation model will separate reusable job definitions from approved positions and employee assignments. This prevents the reporting structure from breaking when an employee leaves or changes role.

Organisation Hierarchy

Level	Entity	Purpose
1	Legal Entity	Registered employer, trade licence, MOHRE establishment and payroll identity
2	Branch and Work Location	Physical or remote location, emirate, free zone and attendance calendar
3	Division and Cost Centre	Financial and operational reporting level
4	Department	Functional team with a department head position
5	Designation	Reusable title, job family, grade and competency template
6	Position	Approved seat with reporting position, budget, status and headcount
7	Employee Assignment	Employee occupying the position for a defined period

Designation and Position Rules

- Designation stores title, code, job family, grade, skill level and default reporting designation.
- Position stores legal entity, branch, department, cost centre, designation, reporting position, budgeted salary range and vacancy status.
- Employee assignment stores employee, position, effective dates, assignment type and approved temporary manager override.
- The organisation chart uses position reports_to_position_id. Employee names appear only when positions are occupied.
- A position may remain visible as vacant. Historical assignments remain available after transfers and exits.
- The system must prevent reporting loops and must validate that the selected manager belongs to an allowed entity and reporting level.

Illustrative Reporting Example

Position	Designation	Reports to position	Occupancy
P100	Chief Executive Officer	None	Occupied
P210	Chief Technology Officer	P100	Occupied
P310	Engineering Manager	P210	Three approved positions
P410	Software Engineer	Relevant P310 position	Occupied or vacant

Organisation Administration

- HR can create positions, open or freeze vacancies and set effective dates.
- Transfers and promotions require approval and produce employment-history entries.
- The chart supports search, department and entity filters, collapse and expand, vacant-position display and selected-manager team view.
- Headcount reports compare approved, occupied, vacant and frozen positions by entity, department and cost centre.

3 UAE Legal and Operational Requirements

The system must apply rules by legal entity, work location, employee nationality, employment type and jurisdiction. Mainland, free-zone, DIFC and ADGM profiles must not share one hard-coded calculation path.

Jurisdiction and Employer Configuration

- Store trade licence, MOHRE establishment number, WPS employer identity, payroll agent, bank details, emirate and free-zone authority.
- Assign each employee to one employing legal entity and one applicable jurisdiction profile.
- Support UAE mainland rules and configurable free-zone rules. DIFC requires qualifying-scheme or DEWS handling; ADGM uses its own employment regulations.
- Version all statutory rules with effective dates so historic payroll and settlements remain reproducible.

Payroll and Wage Protection System

Private-sector wages are generally paid monthly through the Wage Protection System in the amount and at the time agreed in the employment contract. The product must therefore treat WPS as a controlled payroll output, not a label on a generic CSV.

- Employee payroll identity, MOL identifier, bank or agent routing data, IBAN and salary components.
- Configurable earnings, allowances, deductions, overtime, unpaid leave, loans, advances, bonuses, commissions, arrears and recoveries.
- Draft, calculated, reviewed, approved, paid, reversed and closed payroll states with maker-checker separation.
- Validated SIF generation for the selected bank or exchange house, with employee and employer records, totals, timestamps and rejection handling.
- Payslips, bank advice, payroll register, WPS reconciliation and accounting journal export.
- Immutable audit history for salary changes, pay-run adjustments, approvals, exports and payment status.

Leave Attendance and Overtime

The leave and attendance engine will apply the employee's work calendar and jurisdiction profile. UAE private-sector guidance sets a general baseline of eight hours per day or 48 hours per week and reduces normal daily working hours by two hours during Ramadan. Sector-specific exceptions must remain configurable.

- Annual, sick, maternity, parental, bereavement, study, Hajj, unpaid and company-defined leave policies.
- Accrual, eligibility, carry-forward, expiry, encashment, attachments and multi-level approval.
- Shift planning, weekly rest days, public holidays, Ramadan schedules, late arrival, early departure and overtime requests.
- Attendance data from mobile geofencing, web, biometric devices or approved manual corrections.
- Approved unpaid leave and overtime automatically feed the payroll calculation.

End of Service and Final Settlement

For eligible expatriate full-time employees under the UAE mainland framework, gratuity is generally based on the last basic salary, with 21 days per year for the first five years and 30 days per year after five years. Eligibility, unpaid absence, partial years, caps, pension status, alternative savings schemes and jurisdiction must be applied before approval.

- Calculate salary through the last working day, unused leave, approved deductions, notice pay, loans, expenses and gratuity.
- Track the reason for separation, notice dates, work-permit and visa cancellation, asset return and clearance approvals.
- Produce a transparent calculation sheet showing inputs, formula version, adjustments and approval history.
- Support DIFC DEWS or another qualifying scheme separately from the mainland gratuity calculation.

Emiratization and Pension

- Track UAE-national headcount in skilled roles by legal entity and reporting period.
- Show target, current count, gap, hires, exits and risk alerts for applicable establishments.
- Store Nafis status, pension authority, contribution account salary and registration dates.
- Calculate and report GPSSA or relevant GCC pension contributions according to the employee and employer profile.
- Maintain evidence to identify and prevent unsupported or artificial Emiratization records.

Employee Documents Health Insurance and Privacy

- Track passport, Emirates ID, residence visa, work permit, labour card, contract, qualification and health-insurance records.
- Send staged alerts to the employee, manager and HR before expiry, with renewal tasks and completion evidence.
- Restrict sensitive identity, salary, medical and bank fields through field-level access controls.
- Encrypt sensitive data, record access and exports, define retention periods and support correction or deletion requests where legally applicable.

4 Functional Module Scope

The release plan keeps the existing broad module coverage but changes the order of investment. Compliance and payroll controls are release gates; supporting talent features follow after the core is stable.

Module	Required capability	Release
Organisation	Entities, branches, departments, positions, assignments, org chart and headcount	Foundation
Core HR	Employee master, contracts, salary history, documents and lifecycle events	Foundation
Attendance	Shifts, calendars, geofencing, biometrics, corrections and overtime	Foundation
Leave	UAE policies, balances, accruals, attachments, approvals and payroll feed	Foundation
Payroll	Calculation, WPS SIF, approvals, lock, reversal, payslips and journals	Foundation
Compliance	Visa, Emirates ID, work permit, insurance, Emiratisation and pension	Foundation
ESS and MSS	Mobile and web requests, payslips, documents, teams and approvals	Foundation
Recruitment	Requisitions, candidates, interviews, offers and position linkage	Growth
Onboarding	Pre-joining tasks, documents, work permit, orientation and probation	Growth
Performance	Goals, competencies, reviews, calibration and development plans	Growth
Learning	Courses, enrolment, certification and expiry	Growth
Expenses Assets Travel	Requests, approvals, settlement, assignment and return	Growth
Analytics	Headcount, payroll cost, turnover, absence, compliance and audit reports	Scale
Integrations	Accounting, banks, biometric devices, email, SMS, APIs and webhooks	Scale

Roles and Access

Role	Primary access
System Administrator	Tenant configuration, integrations and security; no default payroll visibility
HR Administrator	Employee lifecycle, positions, documents, leave, cases and reporting
Payroll Maker	Prepare payroll, adjustments and compliance files
Payroll Approver	Review, approve, reject, close and authorise export
Manager	Own team, attendance corrections, leave, performance and requests
Employee	Own profile, attendance, leave, payslips, documents and requests
Auditor	Read-only access to approved records and audit history

5 Core Workflows

Employee Onboarding

1. Approve a requisition linked to an authorised vacant position.
2. Record the candidate offer, employing entity, work location, salary structure and intended start date.
3. Create the employee and position assignment after offer acceptance.
4. Collect identity and qualification documents and track work permit, visa, Emirates ID, insurance and bank setup.
5. Activate attendance, leave, payroll, ESS access and onboarding tasks on the effective date.
6. Monitor probation and confirmation through an approved workflow.

Monthly Payroll

1. Close attendance and approved leave for the payroll period.
2. Import or approve overtime, unpaid leave, loans, expenses and variable earnings.
3. Calculate payroll using effective-dated salary and jurisdiction rules.
4. Run validation checks for missing WPS data, negative pay, unusual changes and unmatched employee records.
5. Payroll Maker submits the run; Payroll Approver reviews totals and exceptions.
6. After approval, lock the run and generate SIF, bank advice, payslips and accounting journals.
7. Record payment and reconcile accepted, rejected or corrected WPS records.

Leave Request

1. Employee selects leave type and dates; the system calculates working days and available balance.
2. The request routes according to entity, department, duration and leave type.
3. Approved leave updates the calendar and, where applicable, payroll deductions or salary-in-advance calculations.
4. Changes and cancellations preserve the original approval and balance history.

Employee Exit

1. Record resignation or termination, notice dates, last working date and separation reason.
2. Calculate final salary, leave settlement, notice adjustment, loans, approved expenses and EOSB or scheme contributions.
3. Complete manager, HR, IT, finance, asset and document clearances.
4. Approve final settlement and issue supporting calculations and letters.
5. Track work-permit and visa cancellation, disable access and close the position or mark it vacant.

Approval Engine

- Rules support amount, duration, entity, department, employee grade and request type.
- Workflows support sequential and parallel approvals, delegation, escalation and service-level timers.
- Every approval records actor, timestamp, decision, note and before-and-after values.
- An approver cannot approve their own sensitive payroll or salary-change transaction.

6 Security and Nonfunctional Requirements

Requirement	Target
Authentication	Secure identity provider support, multi-factor authentication and session revocation
Authorisation	Tenant, entity, role, manager scope and field-level permissions
Data protection	Encryption in transit and at rest, secrets management and masked sensitive fields
Audit	Immutable log for sensitive reads, writes, approvals, exports and configuration changes
Availability	Defined backup, restore, monitoring and incident-response objectives
Performance	Pagination, indexed reporting paths and acceptable response targets under expected headcount
Localisation	English and Arabic content, right-to-left layout, UAE dates, AED and configurable calendars
Accessibility	Keyboard operation, readable contrast, labelled fields and screen-reader support
Testing	Unit, integration, contract, security, payroll golden-case and end-to-end regression suites
Change control	Effective-dated rule versions, release notes, migration scripts and rollback plans

Payroll Test Data

The test suite must include approved UAE payroll scenarios rather than only technical API tests. Golden cases will cover new joiners, exits, unpaid leave, overtime, salary revision, arrears, loans, rejected WPS records, expatriate gratuity, Emirati pension and jurisdiction differences. A payroll specialist must sign off the expected result for each case.

Data Migration

- Profile and cleanse existing employees, departments, managers, salary data and compliance documents.
- Create legal entities, branches, designations and positions before assigning employees.
- Map existing manager_id relationships to reporting positions and flag ambiguous or circular relationships.
- Reconcile opening leave balances, salary history, loans, gratuity liability and payroll year-to-date values.
- Run trial migration, business validation and final cutover with reconciliation reports.

7 Competitor Benchmark

The benchmark uses current official vendor product descriptions. Vendor claims should be tested during demonstrations and proof-of-concept payroll runs.

Product	Prominent capability	Lesson for GOCs HRM
Bayzat	UAE-focused HR, payroll, WPS, expenses, benefits and insurance in one platform	Connect HR records to payroll, expenses and employee benefits instead of maintaining separate data
ZenHR	GCC localisation, WPS, gratuity, bilingual ESS, attendance devices and performance	Arabic and local rules must be product-wide capabilities
Zoho Payroll UAE	SIF, pension, EOSB, loss of pay, arrears, reversals, audit and accounting integration	Payroll depth and controls matter more than the number of screens
greytHR	Core HR, leave, attendance, organisation chart, ESS and WPS at an SME-oriented price point	Keep the first compliant release simple to configure and operate

Competitor Parity Coverage

This matrix converts the Bayzat and ZenHR benchmark into explicit product requirements for the developer handoff. GOCs HRM should cover the same business outcomes while keeping its own UAE rules, data model and user experience. Vendor-specific integrations, certifications and AI claims remain proof-of-concept items until demonstrated and contracted.

Capability area	Bayzat baseline	ZenHR baseline	GOCs HRM handoff requirement
Core HR and organisation	Employee records, org chart, lifecycle and one employee database	Central employee database, hierarchy and lifecycle tracking	Legal entity, branch, department, designation, position, assignment, history and headcount must be the shared system of record
Documents and renewals	Digital records with passport, visa and contract expiry reminders	Document management with employee records	Document vault, expiry alerts, assigned renewal tasks, evidence and controlled access for passport, Emirates ID, visa, permit, contract and insurance
Leave and time off	Custom policies, balances, overlap checks, requests and approvals	Leave management reflecting UAE rules	Accruals, eligibility, carry-forward, public holidays, attachments, multi-level approval and payroll feed by entity and policy
Attendance and shifts	Mobile attendance, approvals and shift scheduling across locations	GPS or QR, biometric devices, roster planning and overtime	GPS/QR/mobile, biometric integration, schedules, calendars, corrections, Ramadan hours, overtime calculation and payroll sync
UAE payroll and WPS	Automated payroll with UAE WPS compliance and payslips	WPS file generation and submission in bank format	Versioned payroll engine, SIF validation, maker-checker, period lock, reversal, reconciliation, payslips and accounting export
Gratuity and final settlement	UAE gratuity and end-of-service calculations	Gratuity by tenure, contract type and termination reason	Auditable EOSB and final settlement covering eligibility, basic salary, service period, leave, notice, deductions, schemes and jurisdiction
Employee and manager self service	Mobile/web payslips, leave, profile, documents, insurance and expenses	Bilingual mobile ESS for leave, payslips, attendance and updates	English/Arabic responsive ESS and MSS for profile, attendance, leave, payslips, letters, documents, approvals and team visibility
Onboarding and offboarding	Automated onboarding and offboarding tasks	Lifecycle workflows from employee setup through exit	Offer-to-position onboarding, document and visa checklist, probation, clearance, asset return, access disablement and exit settlement
Recruitment and ATS	Hiring workflow, candidate matching and career-page/video capabilities	End-to-end recruitment from sourcing to offer	Requisitions linked to vacant positions, candidate pipeline, CV screening, interviews, offers, approvals and conversion to employee
Performance and talent	Goals, reviews, surveys and AI-supported talent insights	OKRs, competencies, 360 feedback and development analytics	Goal cycles, competencies, 360 feedback, reviews, calibration, development plans, surveys and optional AI insights with human approval
Expenses, finance and benefits	Expenses, accounts payable, corporate cards, insurance and employee benefits	Employee expense/overtime requests and payroll integrations	Expense claims, approvals, reimbursement/payroll feed, AP export, optional cards, health insurance records, benefits catalogue and claims tracking

Capability area	Bayzat baseline	ZenHR baseline	GOCs HRM handoff requirement
Workflow and integrations	No-code workflows, tasks, service desk and broad integrations	20+ integrations and connected onboarding/payroll	Configurable approval chains, tasks, reminders, delegation, escalation, API/webhooks and connectors for accounting, banks, devices, email and SMS
Reporting and analytics	Real-time HR/payroll reporting and AI reporting	Dashboards for payroll, attendance, headcount, performance and compliance	Role-secured dashboards, custom report builder, payroll cost, headcount, turnover, absence, compliance, WPS and audit reports
Security and localisation	ISO 27001:2022 and SOC 2 Type 2 claims; GCC localisation	SOC 2 Type II claim; Arabic/English and location policies	MFA, tenant/entity/field permissions, encryption, immutable audit, retention, English/Arabic RTL, AED, multiple workweeks and jurisdiction profiles

Parity definition. A capability is considered covered only when it has a data model, user workflow, role permissions, audit trail, integration or export behaviour where relevant, and an acceptance test. A marketing label or a screen without the underlying calculation and control is not sufficient.

Recommended Product Position

The initial product should target small and mid-sized UAE employers that manage one or more legal entities and need reliable employee records, renewals, payroll and manager workflows. The product should compete on clarity, configurable local rules and traceable calculations. Insurance brokerage, advanced artificial intelligence and a large integration marketplace can remain later-stage differentiators.

Build Rather Than Copy

- Adopt the operational patterns that make UAE payroll safe: effective dates, validation, approval, locking, reconciliation and audit.
- Retain the existing product's broad HR coverage, but simplify screens and reduce duplicated data-entry paths.
- Keep statutory logic in versioned services instead of embedding formulas across pages and controllers.
- Provide APIs and exports so customers can connect their existing accounting, attendance and banking processes.

8 Delivery Roadmap

Phase	Outcome	Main deliverables	Exit condition
Phase 0 Discovery	Approved rules and scope	Entity and jurisdiction inventory, bank SIF specification, payroll policies, field mapping and signed scenarios	Business and payroll owners approve the requirements
Phase 1 Foundation	Reliable organisation and employee data	Legal entities, branches, departments, designations, positions, assignments, access model and migration tools	All active employees occupy valid positions without reporting loops
Phase 2 Compliance	Controlled UAE payroll	Attendance and leave feeds, payroll states, WPS SIF, EOSB, pension, Emiratisation, audit and document workflows	Parallel payroll matches approved expected results
Phase 3 Experience	Usable employee and manager services	Arabic/English ESS and MSS, mobile flows, notifications, approvals and responsive portal improvements	Pilot users complete priority tasks without HR intervention
Phase 4 Growth	Connected talent lifecycle	Recruitment, onboarding, performance, learning, travel, expenses, assets and integrations	Modules share the employee and position model
Phase 5 Scale	Operational resilience	Performance tuning, observability, disaster recovery, analytics, customer configuration and support tooling	Production service objectives are demonstrated

Recommended First Three Engineering Epics

1. Organisation foundation. Introduce legal entities, positions, reporting positions and effective-dated employee assignments; migrate the current manager_id chart.
2. Payroll control layer. Add payroll states, validation, approvals, locking, reversal and immutable audit before expanding calculations.
3. UAE compliance services. Implement versioned WPS SIF, leave, overtime, EOSB, pension and Emiratisation rules with signed golden test cases.

Governance

Decision area	Required owner
Product scope and release acceptance	Product Owner and business sponsor
UAE employment and payroll rules	UAE HR and payroll specialist
SIF and payment output	Finance, payroll and selected bank or exchange house
Architecture and security	Engineering lead and security owner
Employee data and migration	HR data owner
User acceptance	Named HR, payroll, manager and employee representatives

9 Acceptance Criteria

Organisation

- Every active employee has one valid primary position assignment for the effective date.
- The system prevents circular reporting and displays occupied and vacant positions correctly.
- Transfers, promotions and acting assignments preserve history and update the chart on the effective date.

Payroll and WPS

- A payroll run cannot be approved while required employee or WPS data is missing.
- The approved SIF passes the selected bank or exchange-house validation for agreed test cases.
- Attendance, overtime, unpaid leave, salary changes and deductions reconcile to the payroll register.
- Closed payroll cannot be edited; authorised reversal creates a complete linked audit record.

UAE Compliance

- Leave and overtime results match the approved jurisdiction policy test cases.
- EOSB and final settlement show the formula version, basic salary, service period, exclusions and adjustments.
- Emiratisation and pension reports reconcile to the active employee population and entity configuration.
- Visa, Emirates ID, passport, work permit and insurance alerts produce assigned renewal tasks before expiry.

Security and Experience

- Users can access only permitted entities, teams and sensitive fields.
- Sensitive reads, changes, approvals and exports appear in the audit log.
- Priority employee and manager workflows operate in English and Arabic with right-to-left support.
- The approved regression suite passes before release and payroll golden cases remain unchanged unless a rule version is intentionally updated.

Competitor Parity Gate

- The product demo must show the complete employee lifecycle from an approved vacant position through onboarding, payroll, ESS, manager approval and exit.
- Each Bayzat and ZenHR capability in the parity matrix has a named backlog item, owner, release phase and acceptance test; any deliberate deferral is recorded and approved.
- A pilot employer must complete a UAE payroll run, WPS/SIF validation, leave and attendance cycle, EOSB scenario, document renewal task and bilingual ESS journey without spreadsheet workarounds.
- Integrations, insurance, expense, performance, recruitment, analytics and automation features must exchange data through the shared employee and position model rather than duplicate records.

Launch Readiness Decision

The product may be described as UAE-ready only after the organisation migration is reconciled, payroll and EOSB golden cases are signed off, the selected SIF format is externally validated, access and audit tests pass, and pilot users complete the agreed employee and manager workflows. Until those conditions are met, UAE calculations and exports must be labelled as test or preview outputs.

10 References

The following sources informed the legal and market baseline. Product implementation must use the latest official rules and customer-specific bank or free-zone requirements at the time of deployment.
